

HYDRO S

Water repellent

.....

Colourless and silicone-free liquid, specially formulated for waterproofing walls and façades, which increases the service life and enables self-cleaning, while letting them breathe.

Properties

- HYDRO S can be applied neat to all construction materials: lime, cement, tile, marmorino, stone and cellular concrete, both tinted and uncoated
- It is not effective on non-porous substrates such as some paints, coatings, glass and glazed tile
- Easy to use, it is applied by spraying from bottom to top on a rain-protected substrate until saturated
- It is effective after 24 hours and becomes tolerant to rain after 4 hours of drying
- HYDRO S increases the life of materials
- It prevents infiltration due to shrinkage

Advice

- Wait 8 days before applying HYDRO S if the substrate was cleaned beforehand (essential if it has not been coated recently)
- Wait 28 days before applying HYDRO S if the coating or the joints are new
- Apply a defoaming product to every façade that is more than 6 months old

Uses

Waterproofing walls

Contraindication

Do not expose HYDRO S to rain during application and within 4 hours

Packaging

5-L bucket

Consumption

5 to 40 m²/5 L depending on substrates

Warranty

HYDRO S has a 10-year warranty
